

5 ways to make  
your passwords

# Stronger

than your coffee.

1 ✓

## **Use Complex Passwords**

Think beyond birthdays or pet names. Use a combination of uppercase and lowercase letters, numbers and symbols.

2 ✓

## **Don't Reuse Passwords**

Keep your passwords unique for different apps. A data leak on one website can make all your applications vulnerable.

3 ✓

## **Leverage Password Managers**

Remembering passwords is hard. Password managers securely store them and can even generate unique passwords for your applications.

4 ✓

## **Enable Two-factor Authentication (2FA)**

Even strong locks can be broken. Enable 2FA on all your cloud apps to make it harder for criminals to gain access.

5 ✓

## **Beware of Imposters**

Watch out for phishing emails impersonating familiar contacts. Clicking on links in these emails could put your business at risk.
